Critical Path ➔

US-9 is the dependency for US-19.
US-21 is the dependency for US-22 and US-24.

US-22 needed sessions to be implemented from US-21 to filter the Owner view on their club page (allowing them to see the post submission form). And US-24 needed sessions to store in the database who is the creator of the post.

Anything related to the Current User in the web application is currently hardcoded as its implementation was the last one completed.
